Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BX337353 Homo sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA clone CS0DI040Y106 5-PRIME, mRNA sequence.

1st strand CDNA was primed with a NotI-oligo(dT) primer. Prime prime

end enriched, double-strand cDNA was digested with Not I and cloned

into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library

was normalized. Library was constructed by Life Technologies, a

division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    BX354166 Homo sapiens WEUROBLASTOWA COT 25-NORMALIZED Homo sapiens SA554166 Homo sapiens NEUROBLASTOWA COT 25-NORMALIZED Homo sapiens CDNA clone CSODC015YH04 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and ECOR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BX376199 1000 sapiens NEUROBLASTOMA COT 25-NORMALIZED Homo sapiens CDNA clone CSODC024YAl0 5-PRIME, mRNA sequence.

Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                               proliferation disorders. Specifically, it refers to candidate agents that proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 1) encoding a full length KID enzyme of the invention.

activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein, and act as a modulator of the binding characteristics or biological activity of a traget protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with Kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders and inflammation, for treating cellular proliferation disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating disorders associated with KID and for inhibiting KID and for treating autoimmune disorders are associated with KID and for inhibiting KID and for treating autoimmune disorders are proliferation induced after medical procedures including surgery and angioplasty. This sequence respected by especification states that this motor protein of the invention. Note: The specification states that this armain the properties of the protein featured as SEQ ID NO:2, but this does not

                                     CC This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular CC proliferation disorders. Specifically, it refers to candidate agents that are appable of modulating the activity of target proteins having motor CC domains, such that the target protein directly produces ADP CC or phosphate. Furthermore, this activity can be determined using cor phosphate. Furthermore, this activity can be determined using method that identifies modulators of the target protein, which is a ckinesin-like DDA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antiinflammatories. Accordingly, through gene contact the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 3) encoding a full length CKID enzyme of the invention.

activity, a method of testing for ATPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating disorders associated with KID and for inhibiting KID and for treating autoimmune chieses, arthritis, graft rejection, inflammatory bowel disease and proliferation induced after medical procedures including surgery and proliferation induced after medical procedures including surgery and angloplasty. This sequence represents DNA encoding a human microtubule motor protein of the invention. Note: The specification states that this angles and angles angles and angles angles and angles and angles ang

a thanatos (death)-associated protein (THAP) responsive gene. The method comprises modulating the interaction of a THAP-family polypeptide or its biological fragment with a nucleic acid, and so enhancing or repressing biological fragment with a nucleic acid, and so enhancing or repressing comprises modulating the expression of a gene responsive to a THAP (hemokine complex; (2) a pharmaceutical carrier; (3) a transcription factor decoy consisting a transcription factor decoy described above; (5) methods or comprising a transcription between a nucleic acid and a THAP-family or pryeptide or its biological fragment, or a nucleic acid and a THAP-family or pryeptide or its biological fragment, or a nucleic acid and a THAP-family polypeptide or its biological fragment; (7) a method of constructing a cell inne comprising a THAP-family polypeptide or its biological a transcription a prical vector packaging cell line comprising a transcription or transcription a transcription a prical vector packaging cell line comprision or a THAP-family polypeptide; (8) a method of constructing a cell which expresses a combination that the nucleus; (10) methods for radioristing a test compound that modulates transcription at a THAP responsive element or that modulates the transcription at any papercessive or insufficient apoptosis, inflammation, metatestasis of a cancerous tissue, excessive or insufficient apoptosis, cardiovaccular disease and neurodegenerative activity of a chemokine or a THAP-family polypeptide in an individual; (11) a vector comprising a theretable product; (12) a genetically engineed correct described above or that expression or activation comprising a theretable product; (12) agencially in soluted much transcription or cardiovaccular comprising a multiple or its biological fragment; (13) a method or transcription comprising a multiple or its biological fragment; (13) a method or transcription comprising a multiple or it

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention elates to novel isolated, enriched or purified nucleic acid molecules encoding a kinase polypeptide. The nucleic acid molecule comprises a sequence that: (a) encodes a kinase polypeptide; (b) is a complement of (a); (c) hybridizes under stringent conditions to (a) and complement of (a); (c) hybridizes under stringent conditions to (a) and conditions to (b) peoply of the conditions of an in (a), except that it lacks one or more, but not all, of an CC terminal domain, a coiled-coil structure region, a spacer region and a CC terminal domain, a coiled-coil structure region, a spacer region and a CC terminal tail; or (e) is a complement of (d). The nucleic acid molecules, polypeptides, methods and substance are useful for treating cancers, immune-related diseases or disorders, cardiovascular disease, brain or curronal-associated diseases, and metabolic disorders. The disorders are CC the central or peripheral nervous system, Alzheimer's disease, brain, control or peripheral nervous system, Alzheimer's disease, brain, control infections aultiple sclerosis, amyotrophic lateral sclerosis, viral infections caused by fungi, ocular diseases, miscretion, mood disorders, attention disorders, contition disorders, hypotension, hypertension, psychotic disorders, neurological disorders, dyskinesias, metabolic disorders and organ transplant control the creaters.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           125

                                                                                                                                                                                                                                                                                                                                                                   Prostate cancer associated gene sequences, referred to as prostate cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB50303 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HANDER STANDER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunomodulators and antinfilammatoriae. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynucleotide sequence is human KID DNA (SeqID 5) encoding a full length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            377

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                               8
                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or biological activity of a target protein, modulators of the target protein, and methods of treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders associated with kinesin-like DNA chinding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating cellular complexation disorders and antiflammation, for treating aclular proliferation disorders and antiflammation, for treating disorders associated with KID and for inhibiting KID and for thibiting KID and for thibiting KID and for treating autoimmune disorders as sasociated with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted angioplassy. This sequence represents DNA encoding a human microtubule contracting the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      497
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            423

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                   This invention relates to a novel method for high throughput screening systems used to identify compounds for the treatment of cellular proliferation disorders. Specifically, it refers to candidate agents that are capable of modulating the activity of target proteins having motor domains, such that the target protein directly or indirectly produces ADP or phosphate. Furthermore, this activity can be determined using fluorescence or absorbance readouts. The present invention describes a method that identifies modulators of the target protein, which is a kinesin-like DNA binding protein (known as KID) as cytostatic, cardiants, immunoomodulators and antiinflammatories. Accordingly, through gene therapy, they can be used for the treatment of cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation. This polynuclectide sequence is human KID DNA (SeqID 7) encoding a full length KID enzyme of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                377

The invention relates to human microtubule motor proteins and the nucleic acids encoding them. The invention also relates to a method of screening for modulators of a motor protein which has microtubule stimulated ArPase activity, a method of testing for ArPase activity of microtubule motor proteins, methods to identify candidate agents that bind to a target protein or act as a modulator of the binding characteristics or bloiogical activity of a target protein, modulators of the target protein, and methods of treating callular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders condinifialmmation, for treating disorders associated with kinesin-like DNA binding protein (KID) and for inhibiting KID. The sequences are used for screening for modulators of motor proteins useful for treating callular condisorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and inflammation, for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with KID and for inhibiting KID and for treating autoimmune consisted with kID and for inhibiting KID and for treating autoimmune consisted with kinesin induced after medical procedures including surgery and angioplasty. This sequence represents DNA encoding a human microtubule contraction of the invention.
               New isolated microtubule motor protein, useful for screening modulators for treating cellular proliferation disorders such as cancer, hyperplasias, restenosis, cardiac hypertrophy, immune disorders and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1464 BP; 342 A; 409 C; 428 G; 285 T; 0 U; 0 Other;

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by Pybridisation). Also included is a purified polypeptide comprising a sequence corresponding to a reading frame of the novel polynucleotide. The nucleic acid sequences care useful in diagnostics as expressed sequence tags (SST) for identifying expressed genes or for physical mapping of the human genome, in forensics, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probbes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisease DNA or RNA. The purified polypeptide is useful for generating antisease DNA or RNA. The purified polypeptide is useful for generating antisease of sequences. Note: The greent sequence is useful and isolated cDNA/EST sequences. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       259
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        439
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     275

surveying tissues.

```
The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragaments, and esquences in the specification, or their complements or fragaments, and encoding at least 8 amino acids of any of the 6888 amino acids agequences (C fully defined in the specification. The probe is a single axon probe that whytidises under high stringency conditions to a nucleic acid molecule expression (comprising a plurality of single exon nucleic acid molecule expression (comprising a plurality of single exon nucleic acid molecule expression (comprising a plurality of single exon nucleic acid molecule compared by solatable or amplifiable from the plurality, a single company human gene expression, a method of an addressably storession, a vector comprising the single exon probe cited above, where each of the plurality of probes is separately and pene expression, a wector comprising the single exon probe cited above, and solated antibody that binds specifically to a peptide cited above, and contiguous amino acids of any of the above mentioned amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, acustomer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable contradus methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a contain their cord including data on the expression of a single exon microarrays. C ited above. The probe, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying c trisques to detect the presence of expression of a single exon microarrays. In addition, the probes are useful indentifying and characterising single exon probe of the invention. Note: The sequence data for this endits and an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        818 GATTGACTTGGCTGGGTCAGAGGACAACCGGCGCACAGGCAACAAGGGCCTTCGGCTAAA 877

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide accomprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences [ully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid molecule comprising a plurality of probes for measuring human center expression, a method of and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a vector comprising the single exon corriguous amino acide of any of the above-mentioned amino acide of any of the above-mentioned amino acide of any of the above-mentioned amino acide of soluted antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human apene expression data by subscription, and a computer-readable corrage medium which contains a database having a plurality of records corted above. The probes, methods and apparatus are useful in gene corrage medium which contains a database having a plurality of records cited above. The probes, methods and apparatus are useful in gene expression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays.
